SUMMARY

Data Analyst working at the intersection of data, insights, and decision-making - skilled in SQL, Power BI, Tableau, and Excel. Brings a structured approach to exploring data, uncovering patterns, and presenting them through clear, intuitive dashboards. Combine analytical thinking with problem-solving skills, supported by a solid foundation in Data Structures and Algorithms

EDUCATION

Vignan's Institute of Information Technology, Visakhapatnam

B.Tech in Computer Science & Cybersecurity

CGPA: 9.73 / 10.0

2023 – 2027

Sri Chaitanya Junior College, Visakhapatnam

Board of Intermediate Education – 12th Grade

CGPA: 9.8 / 10.0

2021 – 2023

EXPERIENCE

Power BI Intern – Microsoft Elevate Program

Feb 2026 – Mar 2026

Remote – AI Pulse: Adoption & Productivity Analytics

[REPO LINK](#)

- Built an interactive Power BI dashboard analyzing 1,200+ records across 35+ AI tools, surfacing 100M+ users, 36% avg productivity gain, and a 2.9+ satisfaction score across 2021–2025.
- Delivered 5 key insights and 5 data-backed recommendations on high-impact AI tools as the final project submission to Microsoft Elevate.

PROJECTS

AppAtlas – Kimball Data Warehouse for App Store Intelligence | SQL Server · ETL · Data Warehousing

[REPO LINK](#)

- Built a Kimball star schema DW on **120,500+ app store events** across **6 CSV sources**; implemented full ETL pipeline via 2 stored procedures with TRY-CATCH error handling and execution timing.
- Resolved 7 data quality issues (NULL values, mixed casing, hidden CHAR(13) characters, negative discounts) across 14 columns; validated Staging vs DW using UNION ALL comparison queries.
- Designed **6 business-focused data marts** and analytical SQL queries using LAG (MoM/QoQ/YoY), DENSE_RANK, nested window SUM, and CTEs — delivering KPIs across Marketing, Finance, and Executive teams.

Silent Exit – Customer Churn Detection | SQL · BigQuery · Looker Studio

[REPO LINK](#)

- Processed **89,075 customer records** to uncover key churn drivers; identified **₹9.84M in at-risk revenue** with targeted retention insights.
- Built a multi-page dashboard for customer behavior, churn trends, and revenue risk KPIs — revealed long-inactive customers are **3x** more likely to churn.

Behind the Green Squares – GitHub Bot & Fake Profile Detection | Python · Pandas · Matplotlib · Seaborn

[REPO LINK](#)

- Cleaned a **105,000-row dataset** (72,000+ missing/inconsistent values, 5 conflicting date formats) into 101,807 analysis-ready GitHub profiles using Pandas.
- Engineered a 7-signal weighted suspicion score flagging 34% of profiles (34,699) as inauthentic — including **2,668** fake-popularity accounts (**1,000+ stars**, **<10 forks**), **99.5%** independently validated.
- Built 18 visualizations across 8 chart types; identified README quality as the strongest authenticity predictor (**r = -0.74**) and a **66% vs 0.01% spike** in late-night commits among suspicious accounts.

CERTIFICATIONS & ACHIEVEMENTS

Certifications: IBM (SQL, Data Fundamentals) | Deloitte Data Analytics Job Simulation | HackerRank SQL

Achievements:

- Solved 556+ problems on LeetCode — 50+ Database and 344+ DSA problems across Java & Python.
- Ranked #1 in department (2023–2027 batch) at Vignan's Institute of Information Technology with a 9.73 CGPA.

TECHNICAL SKILLS

Languages: Python, SQL (MySQL, MS SQL Server), Java

Analytics & BI: Power BI, Tableau, MS Excel

Libraries: Pandas, NumPy, Matplotlib, Seaborn

Tools: SQL Server, BigQuery, Looker Studio, Jupyter Notebook, VS Code

Concepts: Dashboard Development, Data Warehousing, ETL Pipelines, Medallion & Kimball Architecture, Star Schema, DSA
